

Dhruv Bhagat

AI/ML Engineer & Cloud Developer | Software Development + Analytics
+91 9998727137 | Vadodara | bhagatdhruv2005@gmail.com | [LinkedIn](#) | [GitHub](#)

SUMMARY

Software Engineer specializing in Backend Development, Cloud Systems, and AI-driven applications. Experienced in building end-to-end intelligent systems—from data pipelines and predictive models to cloud-deployed APIs and real-time analytics platforms. Proficient in Python, Node.js, and scalable system implementation, with hands-on experience in AWS cloud, Docker, and automation workflows. Strong focus on developing production-ready, data-driven solutions for real-world problems.

EXPERIENCE

Mobile App Developer & Game Developer

May 2025 – June 2025

Intern at TejasKP AI Software

Vadodara, India

- Engineered and deployed a scalable vehicle lubrication service mobile application named ‘Kaushal Associates of Lubrication’, allowing users to book services, track requests, and manage service workflows through an intuitive and scalable interface.
- Built a **car racing game** with realistic vehicle mechanics, track markings, collision detection, scoring systems, and interactive gameplay elements.

EDUCATION

Chandubhai S. Patel Institute of Technology (CSPIT), Charusat University

Bachelor of Technology (B.Tech) – Computer Science and Engineering

CGPA – 8.67

Bright School – GSEB

HSC – 77%

PROJECTS

- End to End E-Commerce Churn Intelligence System** [GitHub](#)
Designed and deployed a cloud-based churn prediction system using Random Forest, achieving 93.82% ROC-AUC. Implemented RESTful APIs to serve real-time predictions and enable scalable backend integration. Also integrated automated workflows using n8n for business actions and notifications. Containerized the application using Docker and deployed it on cloud platforms (Render, Vercel), ensuring scalability and production-grade performance.
- AI-Powered Smart ERP Platform** [GitHub](#)
Engineered a production-grade AI-powered ERP system with modular architecture, role-based access control (RBAC), and real-time analytics dashboards, powering scalable enterprise workflows and automation.
- Safeguard: Smart IoT Suicide-Prevention & Emergency Response System** [GitHub](#)
Architected an IoT-enabled emergency response system integrating ESP32 sensors with a multi-role Flutter-Firebase platform, facilitating real-time event detection, alert pipelines, and scalable notification systems.

TECHNICAL SKILLS

- Languages:** Python, JavaScript, SQL
- Frameworks & Libraries:** Node.js, React.js
- Cloud & DevOps:** AWS (Academy Certified – EC2, S3, Lambda, API Gateway, DynamoDB), Docker, CI/CD (Exposure), Render, Vercel, Firebase
- Backend & APIs:** RESTful API Development, Secure Authentication, Microservices Architecture, Scalable System Design, Postman
- AI & Data:** Machine Learning, Data Preprocessing, Feature Engineering, Model Evaluation, Generative AI (Basics)
- Frontend & Analytics:** Data Visualization, Real-time Dashboards, JavaScript
- Automation:** n8n Workflow Automation
- Operating Systems:** Linux (Basic Commands, Scripting)
- Systems:** Distributed Systems (Basics), API Design
- Tools:** Git
- Practices:** Agile Development, Modular Architecture
- Soft Skills:** Problem Solving, Strategic Thinking, Cross-functional Collaboration

CERTIFICATIONS

- AWS Academy Graduate – Cloud Developing (40 hours) | Amazon Web Services
- NPTEL Online Certification - Design and analysis of algorithms
- NPTEL Online Certification - Data Structure and Algorithms using Java
- IBM Certified Course - Machine Learning with Python
